

## Blackboard 9.1 SlideShare Mashup Fails to Display

### How do I fix or work around the problem with existing SlideShare presentations?

Following the release of a recent update, Blackboard Learn has had trouble getting SlideShare mashups to work correctly. The recommended patch applied on the UST Blackboard server now allows instructors to add SlideShare presentations to course content via the Mashup tool without compatibility errors; however, errors may occur when trying to play presentations already added to courses causing SlideShare to present a blank presentation.

Fortunately, the way to fix the latter problem is simple.

1. In the content area, find the SlideShare presentation item; click the contextual arrow, and select **Edit**.

2. Click the **Submit** button. This will re-encode the embedded presentation correctly.
