

Course Content: Hiding Details

The **Hide Details** icon is a feature that allows the instructor to temporarily hide details, information, and attached files associated with course content from view on the computer screen. The advantage is that more item names will fit vertically on the screen. *By doing this, you are only hiding this from your view and not your students view.* To get the details, information, and attached files to be viewable again, click the **Hide Details** icon again. All details, information, and attached files will now be visible on the screen.

To hide the details of a content item or folder, click the **Hide Details** icon to the right of the content folder.

This will hide any information, details, or attached files associated with the content folder from view on the computer screen. Click the **Hide Details** icon again to make the information, details, or attached files visible again.
