

Theme Personalization

You can change the color of your home page by clicking the **Personalize Page** button and using any of the various color themes.

Choose a color palette for all the elements on the page. Since this is your personal home page, other users will not see the changes. Blackboard has a small library of color themes from which you can choose. Click the theme that you would like, preview it in the Current Selection area, and then click **Submit**. You will see the new color theme on the edges of the home page.
