How to Create a Citation for an Internet Source (MLA Style)

General Website Citation:
Author’s name (Last, First). “Name of specific page.” Name of Website. Date of posting/revision. Name of sponsoring institution. Date of access <URL>.

This particular website does not have an author, so the citation would begin with the name of the specific page “Alfred Nobel.”
Name of website = Nobelprize.org
URL = http://nobelprize.org/nobel/alfred-obel/index.html
Date of posting/revision = May 27, 2004
Name of sponsoring institution = Nobel Foundation
Date of access = the day you looked at the page

Therefore the correct citation would read:

<http://nobelprize.org/nobel/alfred-nobel/index.html>
